8min
Debubble time

Tips1.

Make no bubble between OCA and polarizer and screen before laminat, otherwise the bubble can not be remove.

Tips2.

Gently press the middle of the LCD, Keep the contact surface between glass and screen as small as possible.

Tips3.

Put the LCD into vacuum chamber as soon as possible after alignment

Tips4.

If there are still some tiny bubble after bubble remove, do not squeeze it, just put it back and do the bubble remove again

Tips5.

Some tiny bubble in the edge of LCD, it will disappear after 5-12hours, don't worry about it

Tips6.

The quality of the OCA is important fot laminate
